Lessons from EyeWire

IDEA:

If we build it, they will play.

NOPE

REALITY:
carefully crafted, slowly built community

no substitute for time spent interacting with participants. Talk about EyeWire chat

- in absence of (or even in addition to) metrics, interactions allow you to understand system flaws and strengths
- in our case, slowness and confusion. improve server speed, clarify tutorials, create helper videos.

MEDIA

crucial. 60% of eyewire signups come within 5 days of major media coverage.

most recently we were on the cover of the NYT. over the past two years over 300 news stories have covered us. We're fortunate now that many media outlets come to us..but that wasn't always the case.
we made it happen. aggressive outreach.

Established a presence on social media prior to outreach so when they look for us, there's a history.
beyond media, allows participants to keep up with progress and connect with one another. We also share news and funny things.

Image: Beatrice the Biologist

We also share news and funny things

don't be afraid. you'll be confused. we once got DONGed by vsauce. Yah. never know where your traffic flood will come from

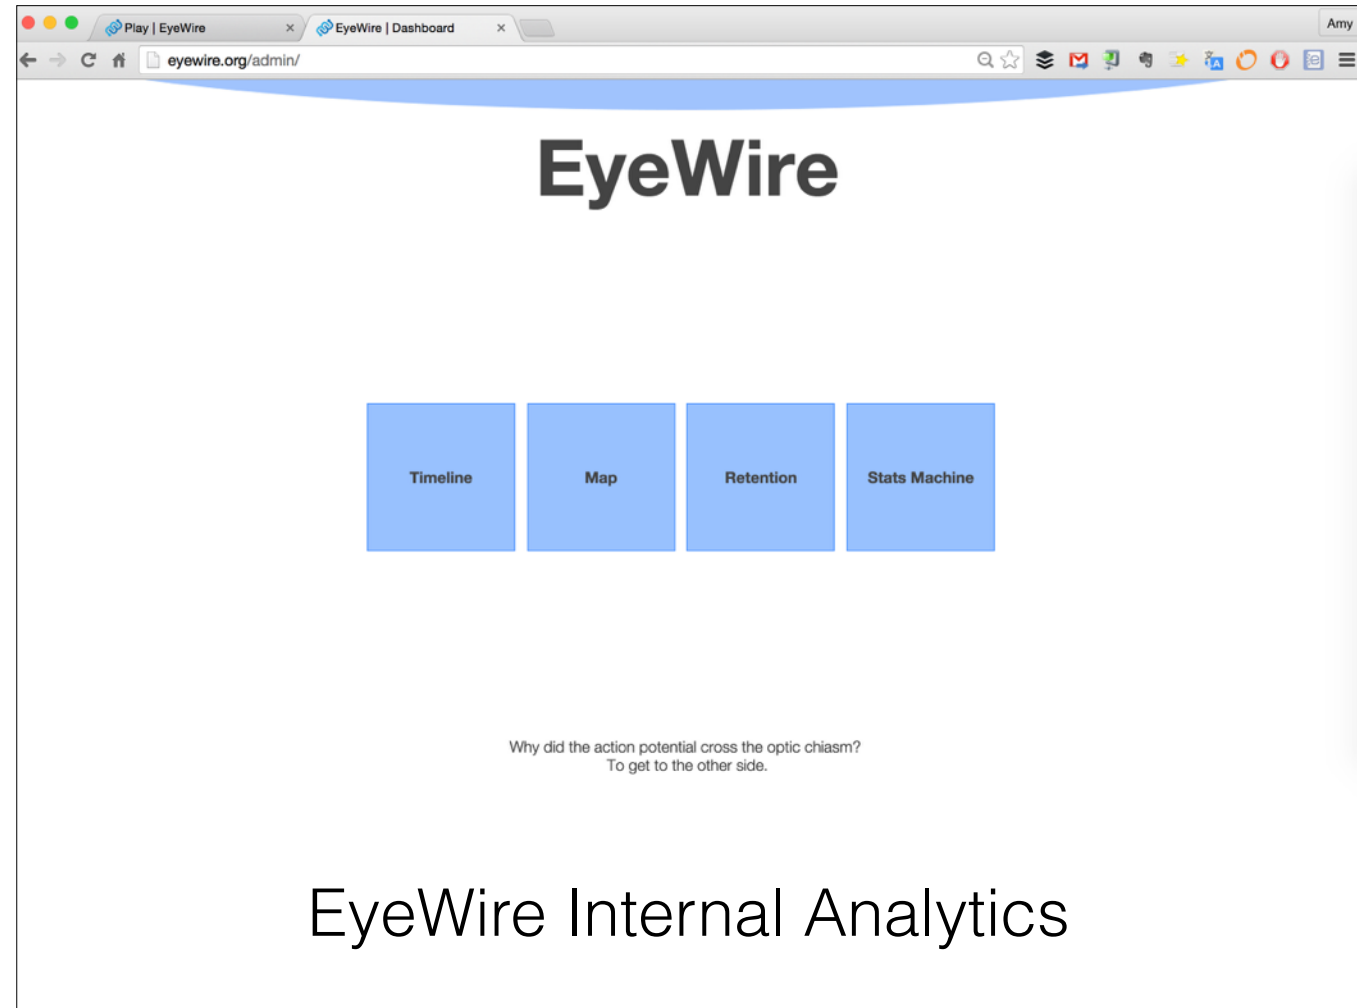

I F*ing Love Science

a lesson in new media. nouveau media, esp facebook pages and youtube channels, can send masses flooding to your site. IFLS sent 10x more traffic than the NYT. YouTube's Vsauce and Sourcefed nearly crashed our site. An obscure buzzfeed clone in Poland is still one of the top 30 referrals .

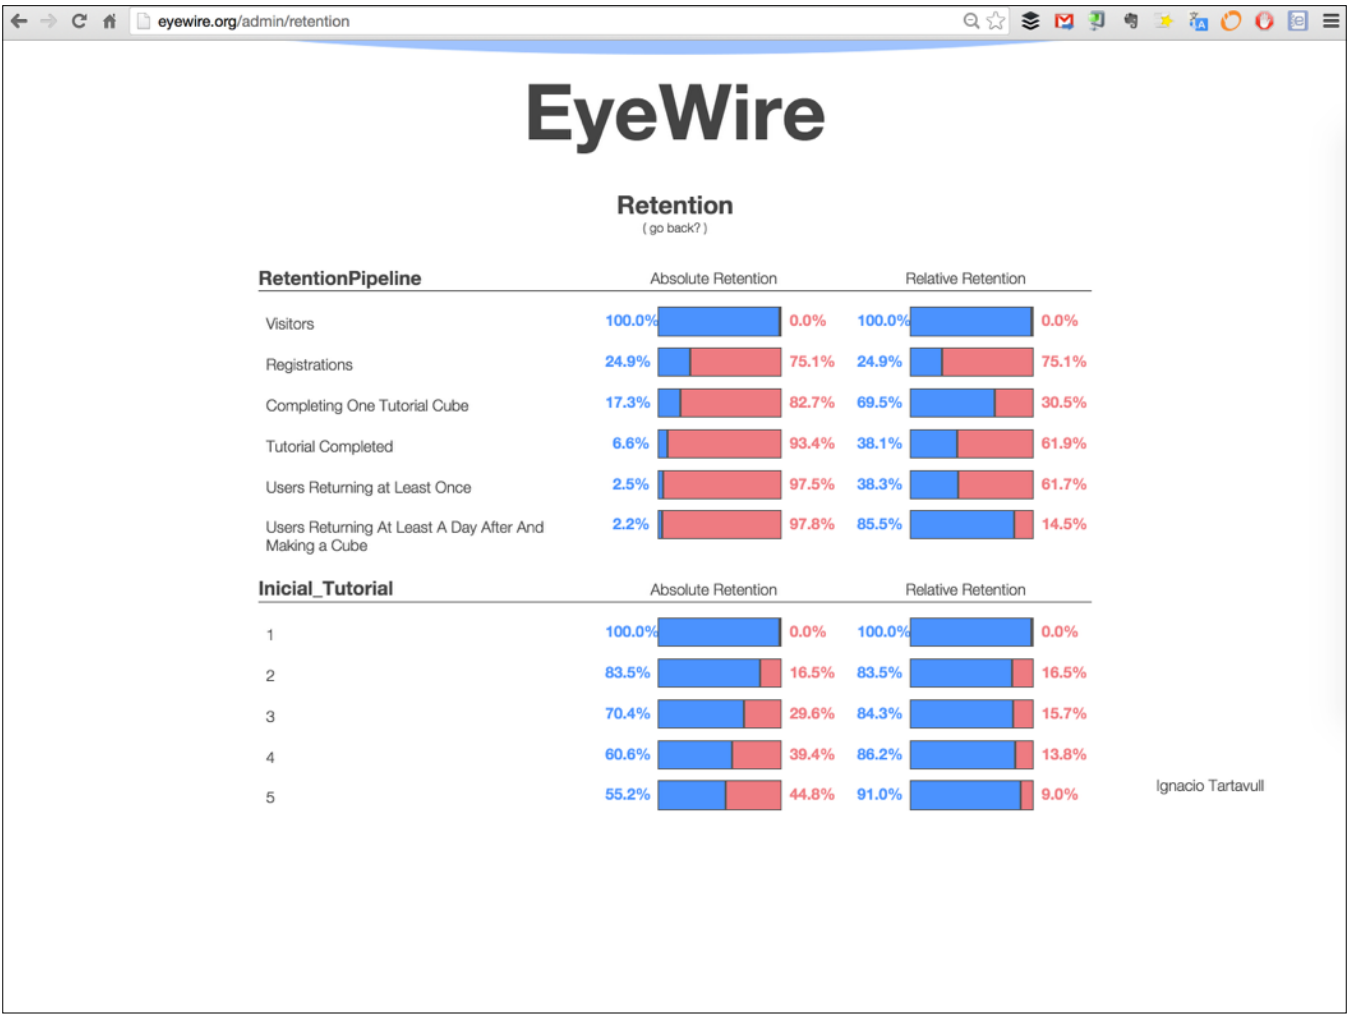

EyeWire All-Time Top Referrers — Google Analytics

Source ?	Acquisition
	Sessions ? ↓
	667,081 % of Total: 46.84% (1,424,137)
1. eyewire.org	190,511 (28.56%)
2. facebook.com	72,736 (10.90%)
3. blog.eyewire.org	41,362 (6.20%)
4. reddit.com	38,652 (5.79%)
5. youtube.com	35,697 (5.35%)
6. forum.eyewire.org	21,075 (3.16%)
7. joemonster.org	17,416 (2.61%)
8. npr.org	15,613 (2.34%)
9. eyewire.olleh.com	15,576 (2.33%)
10. iflscience.com	12,542 (1.88%)

this should be all the evidence you need that SOCIAL MEDIA is how people will find you

in addition to google analytics, we have extensive internal metrics

in addition to google analytics, we have extensive internal metrics

ENGAGEMENT

just because people sign up doesn't mean they'll stick around. For ex, we saw a huge dropoff a month after we launched - after a debate, we tried something. enter the eyewire games

but competitions have prizes...and we don't have prizes besides points. And at the time we couldn't even add bonus points in the game.

The EyeWire Games

is naming a neuron a prize people care about?
social media showdown. doubles output

Image: The Oatmeal

so much activity our servers crashed, which is another lesson for aspiring citizen science projects: be able to handle traffic surges. once the wave has passed, it won't come again until a new article comes out.

LESSON:

prestige within a community FTW

in fact first neuron mapped in eyewire s named IFLS. I really want to get that in Nature
the first and not the last

while we built the team infrastucture, something amazing happened. players started challenging each other in the game. first with a 16 year old claiming he was the fastest neuron mapper in the world and that he could out-map any person on earth. so we backed up his claim with an “official” challenges coupled with points and glory. A 24 hour race ensued and yes he did literally stay up 24h to play. he’s since done it several times to beat all-time records. another note: Keep a record book! His challenge inspired others.

this wouldn’t have been possible if we didn’t have relationships with our players

ACCURACY & EFFICIENCY

eyewire is completes 5x the work with the same effort now as compared to 2 years ago. this is thanks to

power players

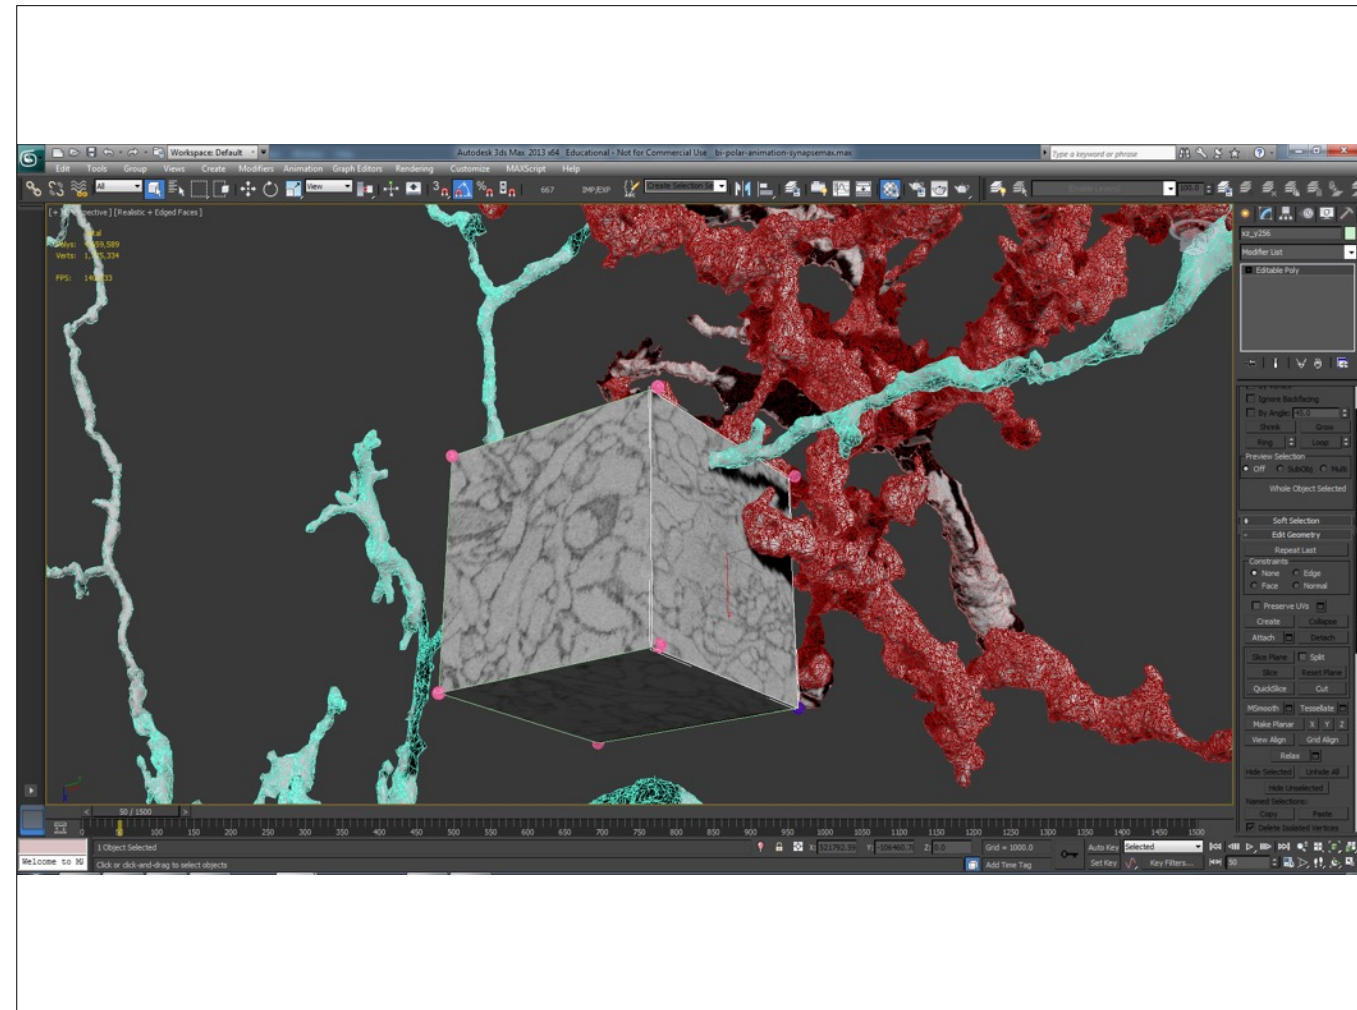

in eyewire, and this is prob the case in your projects - a small fraction of players do almost all the work.

kevin slavin story of killing a game by making it super efficient

- talk briefly about accuracy checks
- top players leveling up to unlock skills that were formerly reserved for lab members

now i want to move on to a part of our project that has become so central that I think it helps define us and that is

DESIGN

EYEWIRE

Eyewire

A GAME TO MAP THE BRAIN

redesign and UX - doubles conversion

OUTREACH & COLLABORATION

citizen science is about bringing science to the masses.

eyewire animations play in Times Square for an entire month

science should be fun

Humanize ourselves

players made that - it's one of many
